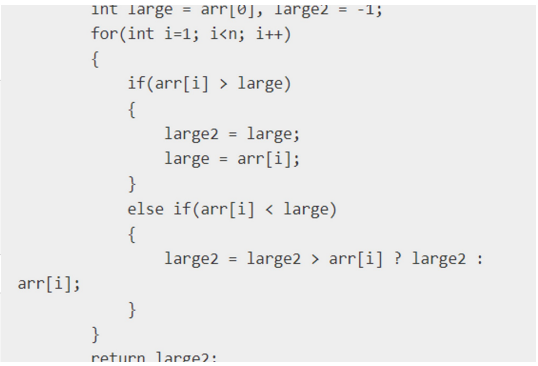
Given an array **Arr** of size **N**, print second largest element from an array.

Example 1:

Input:
N = 6
Arr[] = {12, 35, 1, 10, 34, 1}
Output: 34
Explanation: The largest element of the array is 35 and the second largest element is 34.

Example 2:

Input:
N = 3
Arr[] = {10, 5, 10}



```
        int large = arr[0], large2 = -1;
        for(int i=1; i<n; i++)
        {
            if(arr[i] > large)
            {
                large2 = large;
                large = arr[i];
            }
            else if(arr[i] < large)
            {
                large2 = large2 > arr[i] ? large2 :
arr[i];
            }
        }
        return large2;
```
